

UNFY

---

# ONE PAGER 2018

## INTRODUCTION

Our goal is to build a self-sufficient crypto ecosystem for crowdfunding which is independent and therefore resistant to the negative impact of the external environment. In order to achieve our goal, the Unify platform is based on four core foundations:

### UNIFY COIN

Created in June 2017 with the intention of creating a cryptocurrency for our community, the Unify coin will be used as the main currency for financing projects through the Unify Crowdfunding platform and as one of the payment options in the Unify Market. For all beginners to crypto, the wallets (and the crypto world in general) seem confusing and hard to use. That's why we will be performing an overhaul of the wallets so they are easy and as intuitive as possible. For complete transparency, we will include the Unify Coin on exchanges that perform a direct exchange between crypto currencies as well as fiat currencies. With clear funding and buying usability, the option of direct swapping into fiat, access to a variety of wallets for all main operating systems and inclusion on larger exchanges, we intend to achieve the goal of a strong and stable currency.

### TECHNICAL INFORMATION

Unify is a Proof of Stake (PoS) based coin. Fast, simple, efficient, safe. As a PoS coin, one node is chosen to process the transactions, and other nodes will verify the block. In order to penalize any attempts at cheating, the node's owners must lock some of their coins in a virtual safe (staking) and this stake will be forfeited if any funny business is detected. The more coins you stake, the more likely it is you will be chosen to create the next block. At this moment the reward is 1 Unify coin per block. Proof of Work (PoW) coins keep the blockchain alive through mining, which is the process of solving complex math problems to verify transactions. The mining process unnecessarily consumes energy, puts computing power to waste, and is limited to those who have the hardware to mine.

-  **ALGORITHM**  
POS – Proof of Stake from 15925 block | before – POW – Proof of Work with scrypt algorithm
-  **TICKER / TOTAL SUPPLY**  
UNIFY. Total supply is 19,276,800 coins.
-  **BLOCK TIME**  
1 minute (every minute you have a chance to get UNIFY from staking)
-  **PREMINE**  
181,181 UNIFY (less than 1% of total supply).
-  **BLOCK CONFIRMATIONS**  
6 confirmations (you need 6 confirmations to spend UNIFY you received from the incoming transaction)
-  **COINBASE MATURITY**  
40 confirmations (You need 40 confirmations to spend UNIFY after your wallet hits a PoS block)
-  **MIN / MAX STAKE AGE**  
4 hours (You need at least 4 hours after your funds arrive on your wallet to start staking) . Max Stake Age is 30 days.
-  **BLOCK REWARD**  
Sep 2017 – Sep 2019 – 1 UNIFY per PoS block (1440 UNIFY daily, 525600 UNIFY yearly)

### UNIFY TOKEN

Unify Token (UNT) is a token issued on the Ethereum blockchain. Its design follows the widely adopted token implementation standards through being compatible with ERC20 supported wallets. Just like Unify Coin, it will be tradeable on exchanges and spendable on the Unify Market. After a project is successfully funded, donators will get Unify Tokens in return. The amount of UNT they receive will be valued at 25% of the USD amount they funded. This is calculated according to the current value of the token. For instance, if a funder donates \$100 to a project, they will receive \$25 worth of UNT. If 1 UNT is worth \$1, they will receive 25 UNT, or if 1 UNT is worth \$25, they will receive 1 UNT.

**The initial value of Tokens will be set at 10 cents, and there will be 500 000 000 UNT in circulation.**

The value of the Unify Token will change due to being traded on exchanges. If UNT were to go below \$0.10 on the open market, it would still be distributed as if it was \$0.10 in return for successfully funding a project on the crowdfunding platform.

### UNIFY MARKETPLACE PLATFORM

Unify will be a cryptocurrency based marketplace where you can buy and sell crowdfunded projects as well as other products with alternate cryptocurrencies. By setting up the marketplace, we create an immediate home for the supported projects from the Unify Crowdfunding system. We would like to set up a system through which users will be able to promote their skills and business, so we intend for the Marketplace to be a place for everyone. Think of it as the cryptocurrency equivalent of Etsy, Bonanza, ArtFire etc.

## UNIFY CROWDFUNDING PLATFORM

Unify is a crowdfunding platform which utilizes cryptocurrencies. Funders will be able to support projects using the Unify Coin. Alongside incentives for donating from the developer, funders will receive a certain amount of Unify Tokens in return for a successfully funded project. Incentives allow for a mutually beneficial relationship between the funder and the project with both parties engaging in a 'win-win' arrangement. Without incentives, such projects would have a much harder time collecting donations and would not be able to help as many people. Since incentives lead to more donations and more help being granted, having incentives is both moral and good.

**We believe that with a strong crypto currency, user-friendly systems and a clear benefit system, we can encourage people to support projects that benefit society.**

### — UNIFY COIN

the main currency of financing projects through the Unify Crowdfunding platform

### — UNIFY TOKEN

after every successfully funded project, a funder will get unify tokens of 25% of the USD amount they funded

### — PROJECT RELATED INCENTIVES

bonuses related to project as appreciation for successful fundraising

### — SUPPORTED CRYPTOCURRENCIES

UNIFY marketplace supported cryptocurrencies will be Unify Coin, Unify Token, Bitcoin, Ethereum, Litecoin, etc...

### — PRODUCT

product from successful funded project
